

Task:

Once you've finished watching the PowerPoint presentation (and made some notes, if it helps you to remember things – it helps most of us!) – then spend a while thinking of all the different things in your life that either are computer systems, or have computer systems somewhere inside them. I've started with an example from my house.

Each time you find one, write down:

The Thing	What it does	What the input device is	What form of output it has	What it might have in memory
<i>Washing machine</i>	<i>Washes clothes</i>	<i>Dirty clothes into machine; control to set the program; clean water, detergent ...</i>	<i>Clean clothes, dirty water</i>	<i>A program with several settings for washing clothes</i>

GCSE COMPUTING	COMPUTER SYSTEMS OVERVIEW
COMPUTER SYSTEMS	

The Thing	What it does	What the input device is	What form of output it has	What it might have in memory
